

Local Climate Action Plan - Modena, Italy

Keywords	Participate Approach, Local Climate Action Plan and Energy Forums, Reduction of GHG Emissions, Renewable Energy, Stakeholders Involvement
Pictures	
Description	<p>Implementing energy policy in Modena has involved various projects designed to improve energy saving and raise awareness on energy issues and related problems in all the main City Departments. Policies on energy saving and renewable energy induced the Municipality to join the Climate Alliance, undertaking the commitment to reduce CO₂ emissions by 50% before 2010 from a 1987 baseline. To increase the City's range of actions and policies and to create a new energy culture based on energy saving, the set-up of three to four permanent Energy Forums has been scheduled during the City's BELIEF Project work.</p> <p>Modena's BELIEF Forum project wants to create a sustainable energy action plan at within 30 months. This will be based on the results of the discussion and the ideas and other suggestions coming out from all the workshops being organised. The plan has to be built up by all participants of the Forum and shared by all of them. This will help to suggest projects, ideas and solutions for better sustainable energy development and energy saving to the Municipality, including:</p> <ul style="list-style-type: none"> - Editing and reassessing the Local Energy Plan to adapt it to incorporate sustainable ideas and sustainable development of particular areas. - Setting up and updating the control system for emissions and pollutants like CO₂, NO_x, PM₁₀, acoustic and electromagnetic pollution, implementation by guidelines and balances - Carrying out activities designed to reduce and manage energy consumption - Increasing use of renewable energy - Promotion and implementation of feasibility plans/integrated projects in the areas: Public and/or Private Social Housing, Industrial and Commercial Area planning, Schools and Education
